Interdisciplinary Association for Population Health Science

Event Schedule

Mon, Oct 02, 2023

8:30 AM

Unpacking the Relationship between Education and Dementia in Diverse Populations: A Primer on Data, Measurement, and Research and Funding Opportunities

Registration & Payment Required

Click here to register for this event.

About 6.1 million older U.S. adults have dementia, a number that is projected to more than double by 2060. While education is strongly predictive of dementia onset, we still have much to learn as to why more education is so protective or how the relationship differs across diverse populations.

In this rapidly evolving field, population health researchers are critical to unpacking the role that environmental, biosocial, and genetic factors play in the education—dementia relationship within and between diverse populations.

This workshop will provide an overview of the state of the field, highlight key population-based longitudinal datasets available to study this relationship, and train researchers on dementia-related measures (including biomarkers) available in these studies, including how they can inform our understanding of dementia disparities.

We will also discuss funding opportunities. NIA program officers from the Divisions of Neuroscience and Behavioral and Social Research will provide an overview of funding opportunities of interest to IAPHS members conducting research in the education—dementia area. They will meet with attendees in small groups to answer questions and offer insights into the funding process.

The workshop will be led by Herd & Walsemann, PIs of the NIA-funded Network on Education, Biosocial Pathways, and Dementia in Diverse Populations, and co-sponsored by the Longitudinal Studies of Aging in the U.S. Network and the Biomarker Network, both funded by NIA.

Advancing Equity and Inclusion in Research Using Community-Engaged Approaches
The overarching goal of this workshop is to equip participants with tools and strategies that they can implement within their research to advance equity and inclusion. Content for this workshop is rooted in community-engaged research principals and anti-racist pedagogical practices.

Workshop participants will learn about how a sole focus on diversity can compromise inclusion, as well as the unintentional ways that research can be exclusive. Workshop participants will also learn about how incorporating community advisory boards and qualitative methods within their research can support health equity. This interactive workshop combines a mix of didactic presentation, discussion, and hands-on activities. Workshop activities will include (1) tailoring a study flyer so that it is responsive to community partner perspectives; (2) developing a protocol for engaging with a community advisory board that is customized to each workshop participant’s research needs; and (3) creating open-ended questions that will help workshop participants prioritize the perspectives of community partners and research volunteers.

Research Assistant Professor
University of Michigan

National Center for Health Statistics: Realizing the Power of Data through Linkages
8:30 AM - 12:30 PM, Oct 2
Pre-Conference Workshops
Registration & Payment Required

The National Center for Health Statistics (NCHS) has a longstanding data linkage program that integrates data from national population and provider surveys with key sources of health outcomes and health care utilization information. NCHS linked data have supported a vast array of public health analyses and provided opportunities to build evidence to support health policy and program evaluation. The linkage program is designed to maximize the scientific value of the Center’s population-based surveys and enable researchers to examine the factors that influence disability, chronic disease, health care utilization, morbidity, and mortality. The program has recently completed several data linkages between various surveys, including the National Health Interview Survey and the National Health and Nutrition Examination Survey, and administrative records. The administrative data include the National Death Index, Centers for Medicare & Medicaid Services (CMS) enrollment and claims data and Department of Veterans Affairs administrative data. The workshop will include an overview of the data linkage activities, including the surveys and sources of data used in linkages, a detailed description of the linked files, some examples of analyses using the linked data, and how researchers can access the public and restricted use files.

Strengthening Research for Action at the Intersection of Environmental & Social Determinants of Health
8:30 AM - 12:30 PM, Oct 2
Pre-Conference Workshops
Registration & Payment Required
Social and environmental health risks do not exist in isolation and instead co-occur, particularly among populations that experience health inequities. Pervasive environmental injustices highlight the need for rigorous interdisciplinary socio-environmental research and effective strategies to improve health equity. This capacity-building workshop aims to provide social scientists with theory and skills to engage with environmental health (EH) and environmental justice (EJ) research-to-action. Our three co-chairs (Katherine Dickinson, Allison Appleton, and Hector Olvera) are JPB Environmental Health Fellows and founding members of SERG (Socio-Environmental Research Group), a consortium of interdisciplinary scientists dedicated to studying the joint contribution of social and environmental determinants of health. This workshop has a 3 part structure. 1) Dr. Olvera will provide an introduction to conceptual frameworks illustrating how environmental and social determinants are jointly important to achieve health equity. 2) Dr. Appleton will lead an interactive environmental health primer, introducing key constructs, data resources, and analytic approaches that social scientists can incorporate into their research. 3) Dr. Dickinson will facilitate a research-to-action primer highlighting approaches for partnering with communities and decision-makers to maximize research accountability and impact. Participants will integrate materials during a final pitch session in which participants will propose applications of these research and engagement methods to enhance the impact of their ongoing work.

Contextualizing inequities: Using IPUMS data to describe population-health inequities and study upstream socioeconomic and geographic determinants of health

8:30 AM - 12:30 PM, Oct 2

Pre-Conference Workshops
Registration & Payment Required

Session Chairs:
Sarah Flood, University of Minnesota
David Van Riper, University of Minnesota

IPUMS (ipums.org) offers free, harmonized census and survey data from the U.S. and around the world. IPUMS data facilitate comparative research and analysis of individuals within family and community contexts. This workshop will review IPUMS data suitable for surveilling population-level health inequities and studying upstream socioeconomic and geographic determinants of health.

We will describe the relevant data available through IPUMS, discuss their utility for exploring disparities and contextual factors that contribute to health inequities, highlight their relevance to the conference theme, demonstrate how to use the IPUMS data and access systems, and facilitate discussion of research ideas using IPUMS data.

The first half of the workshop will provide an overview of the IPUMS data collections and a demonstration of the IPUMS data access systems and online analysis tool. The second half of the workshop will be tailored to participant needs. Guided exercises will provide hands-on experience with the IPUMS websites, including finding relevant variables for research topics, utilizing documentation, and building a customized data file. This half of the workshop will also include time to discuss research ideas with workshop leaders and fellow participants. Workshop leaders have detailed knowledge of the wide range of IPUMS data, have used these data in their own research, and have trained others in using these data for exploring population health inequities with multi- and inter-disciplinary perspectives.
Health disparity issues among sex, gender, and gender minority (SGM) are often addressed in research that include communities and population sciences. In tandem with this year’s theme on understanding and closing the gap in population health disparities related to sex, gender and gender minority, an innovative approach to research is required.

NIH supports research to address and mitigate these health disparities due to structural racism, bias, and stigma for NIH-defined populations that experience health disparities including racial and ethnic minority groups, people with lower socioeconomic status (SES), underserved rural communities, and sexual and gender minority groups. Well-conceived research is often directed by strategic plans and research funding opportunities published by the NIH. The NIMHD research framework, NIH RePORTER, HD Pulse, and the Social Determinants of Health Collection (SDOH) on the PhenX Toolkit are resources that can be used to develop grant applications and research dissemination.

The goal of this workshop is to acquaint the conference participants with NIMHD research priorities and NIH resources to develop research applications that address population sciences and community engagement to improve health associated health disparities. NIMHD will present practical exercises and resources to address the health disparity critical gaps in science during the workshop.

With the recent availability of high-quality nationally representative information on dementia in the United States and around the world, population scientists are increasing their attention to asking and answering important questions related to cognitive aging at the population level. This workshop provides an introduction to the rich data resources of the Health and Retirement Study (HRS) that support this kind of research.
Gender-Responsive Monitoring and Evaluation for Women’s Reproductive, Sexual, and Maternal Health

1:00 PM - 5:00 PM, Oct 2
Pre-Conference Workshops
Registration & Payment Required

Click here to register for this event.

Integrating gender into monitoring and evaluation (M&E) for sexual, reproductive, and maternal health is vital not only to catalyze collective action to advance gender equality, but also to hold leaders accountable on commitments in this critical space of women’s and girls’ rights. Many working in this space have long known that “we measure what we treasure, and we treasure what we measure.”

Despite this innate knowledge, gender indicators, approaches, and definitions have evolved to be disparate and complex rather than coherent and strategic. A shared understanding of what gender-responsive M&E should be and how it can be conducted is critical for feminist efforts to advance gender equality.

The session will begin with an overview of why gender-responsive M&E is important for advancing gender equality and different approaches to conducting it. Using women’s sexual, reproductive, and maternal health case studies, participants will discuss in small groups how gender can be integrated into program M&E, including how gender indicators can effectively be used and how to be intentional in their design and dissemination. Each small group will report back to the larger group, and the organizers will collate the collaborative insights for write-up and dissemination. The session will be facilitated by the Monitoring for Gender and Equity (MAGE) Project, a partnership between Johns Hopkins University and the Global Financing Facility (GFF).

Time use data for population health research

1:00 PM - 5:00 PM, Oct 2
Pre-Conference Workshops
Registration & Payment Required
IPUMS Time Use (timeuse.ipums.org) offers free, harmonized time diary data from the U.S. and around the world. These data facilitate comparative research and analysis of individuals within family contexts. Time use data are frequently used in demographic research, with a strong emphasis on examining how time use both reflects and reinforces gendered experiences across the life course. These data, however, are underutilized in population health research despite the emphasis on social determinants of health and life course health and wellbeing. This workshop will review IPUMS Time Use data suitable for surveilling population-level health and for studying socioeconomic and behavioral determinants of health across the life course by gender and among same-sex and different sex families. Our goals are to describe the time diary data available via IPUMS, highlight their utility for exploring gender and sexuality disparities that contribute to health inequities, provide hands-on experience with IPUMS data and access systems, and facilitate discussion of research ideas using IPUMS data.

The first half of the workshop will provide an overview of the IPUMS data collections, a deep dive into time diary data and their relevance for population health research, and a demonstration of the IPUMS Time Use data access systems. The second half of the workshop will be tailored to participant needs. Guided exercises will provide hands-on experience with IPUMS Time Use, including finding relevant variables for research topics, creating custom variables in IPUMS Time Use, utilizing documentation, and building a customized data file. This half of the workshop will also include time to discuss research ideas with workshop leaders and fellow participants. Workshop leaders have detailed knowledge of IPUMS Time Use data, have used these data in their own research, and have trained other researchers on these data.

Leveraging a New Public Resource: Using the Florida State University (FSU)-University of Michigan (UM) O*NET Data Linkage Project to Study Population Health

This workshop will describe the new Florida State University (FSU)-University of Michigan (UM) Occupational Information Network (O*NET) data linkage project, give researchers an overview of what O*NET measures are and why they are useful for scholars across disciplines, and provide examples based on publicly available population surveys (e.g., Current Population Survey).

This new O*NET data linkage project utilizes occupation codeframes (e.g., Census 2000, Census 2010) often used by general population survey data. These data products can be leveraged to evaluate factors that relate to disparities in occupational environments and their associations with health and wellbeing across the adult life course. We describe which measures are included in these new datasets and demonstrate their value in evaluating objectively defined work-related factors, such as occupation specific work activities and work contexts. This workshop will include a description of how the linkage and data products were created, and how these data may be used by population health researchers. This workshop is aimed at introducing researchers who are interested in using these new datasets with survey data containing detailed 2000 or 2010 Census occupation codes.

Positionality for Population Health Researchers: Exploring the Role of Our Social Identities in Quantitative Research
Who we are, who we are in community with, and where we are from all play a role in the science we do—from the research questions we ask to the evidence we use to back our claims. Positionality refers to how our social identities and lived experiences not only influence the choices we make throughout the research process but also how those factors shape how others view us, our work, and the power we hold in a specific research context. The ways in which our perception of self/others, experiences inside/outside of the academy, and power dynamically interact has a direct impact on us as population health researchers and the research we conduct. To address the influence that our personhood may unknowingly have on our science, there is a need to develop a practice of critical self-reflection in our field. This workshop aims to build an understanding of the role of positionality in population health research, examine how our social identities influence our work, and provide participants with the tools necessary to develop their own positionality statements.

**Session Chair**

**Jen Cruz**

Harvard T.H. Chan School of Public Health

**Jocelyn Chu**
Director of Community Engaged Learning
Harvard T.H Chan School of Public Health

---

**Poster Session 1**

6:00 PM - 7:30 PM, Oct 2
Maryland AB

Set-Up: Monday starting at 4:00PM
Takedown: Tuesday by 10:00AM

---

**Networking Reception**

7:30 PM - 8:00 PM, Oct 2
Maryland/Baltimore Foyer

Come and Network with your fellow IAPHS attendees!

---

**Tue, Oct 03, 2023**

**Rise & Shine (Morning Walk)**

6:30 AM - 7:30 AM, Oct 3
Maryland Foyer

Students meet before Plenary 1 in the Maryland Foyer at the conference hotel (Renaissance Baltimore Harborplace Hotel) for a 1hr walk along the Patapsco River. Great opportunity for networking and making connections early in the conference!

---

**Rise & Shine (Breakfast)**

7:30 AM - 8:30 AM, Oct 3
Maryland Foyer

An area will be designated in the Maryland Foyer. Attendees will meet some of the IAPHS student committee members and have the opportunity to ask questions about the student committee. Attendees can also make plans with one another for the rest of the conference days, including making lunch plans.

Findings and Conclusions from the 2023 NASEM Report: Reducing Intergenerational Poverty

12:15 PM - 1:30 PM, Oct 3
Maryland D
Lunchtime Session

Session Chair: Rita Hamad, Harvard School of Public Health

In 2021, Congress directed the National Academies of Sciences, Engineering, and Medicine to conduct a comprehensive study of intergenerational child poverty in the United States that would: i) identify key drivers of long-term, intergenerational poverty; ii) evaluate the racial disparities and structural factors that help perpetuate intergenerational poverty; and iii) identify evidence-based policies and programs that have the potential to significantly reduce the effects of the key drivers of intergenerational poverty. The committee organized its discussion of drivers and best-bet policies and programs to address the drivers in several domains: children’s education, health, and maltreatment; family income and structure; housing, neighborhoods, and crime. The report also identifies key research and data needs to fill gaps in the evidence base. The consensus committee issued its report, “Reducing Intergenerational Poverty,” in summer 2023. In this session, report co-authors will summarize the key conclusions, and prominent members of the policy research community will provide commentary, with opportunities for audience engagement.
Policy, Politics, and Public Opinion: Implications for Scholarship on Race and Social Justice

Session Co-Chair: LaToya O'Neal
Session Co-Chair: Marino Bruce

Mentoring Roundtables

Mentoring Roundtables will be held on Tuesday, October 3, 2023 from 12:15 – 1:30pm at the Conference Hotel. Each table will be hosted by a Mentor with 8-10 registered Mentees to engage in an informal discussion. Lunch is included in the session. Each participant is required to pay a $25 fee to cover the cost of the lunch. Pre-registration is required to participate. To register click here: [https://iaphs.org/mentoring-roundtables/](https://iaphs.org/mentoring-roundtables/)

The Multifaceted Identity of the Emerging Scholar

Session Co-Chair: Akilah Collins-Anderson, Washington University in St. Louis
Session Co-Chair: Sarah Clairmont, McGill University

Discourse about graduate school rarely reflects the multiple identities that students negotiate. This panel adds to this narrative by acknowledging four fundamental identities of the emerging scholar: The “Student,” The Researcher, The Educator, and The Professional. The panelists represent advanced doctoral students/recent graduates who are also part of the IAPHS Student committee. Panelists will share their own experiences, strategies, and invite attendees to contribute to the conversation. Anyone is welcome to attend and participate, including those considering graduate school, current students, recent graduates, and those working with graduate students.

Presenters:

Sarah Clairmont
"The "Student"

Carlyn Graham
"The Researcher"

Akilah Collins-Anderson
"The Educator"

Bee Ben Khalloq
"The Professional"
An Equity-Centered, Community-Driven Approach to Infant Health Equity for Black Babies and Families in Allegheny County

1:30 PM - 2:45 PM, Oct 3
Maryland C

Session Chair: Vinu Ilakkuvan

Black babies and Black women/birthing people in Allegheny County/Pittsburgh experience glaring inequities in maternal and infant health (including with respect to Black infant deaths, deaths of Black women/birthing people from pregnancy and childbirth related complications, and pre-term and low birth weight births). These inequities are built on a foundation of structural and systemic racism, with a long history of discrimination and segregation in the region.

An equity-centered, community driven approach to action is the only way to create meaningful and lasting change for Black women and birthing people and their babies and families.

This panel will describe the efforts of Healthy Start Pittsburgh, its partners, and the Infant Health Equity Coalition they have convened to develop and begin implementing a community-wide action plan - the Allegheny County BIRTH Plan for Black Babies and Families: Battling Inequities & Realizing Transformational Health Outcomes.

This action plan centers the voices, experiences, and leadership of Black women and community members in the region. Panelists will discuss the community-centered nature of the coalition and the equity-focused nature of the BIRTH Plan; how they have operationalized equity through their community-driven action planning and evaluation process and focus on upstream structural and social determinants and associated policies and systems; and the progress, challenges, and opportunities they have experienced in the first year of implementing a 5-year phase one of their action plan.

Presenters:

Jada Shirriel
"A community-driven approach to infant health equity"

Vinu Ilakkuvan
"Operationalizing equity in our community action plan"

Opioid and cannabis laws and policies, opioid policy environment scores, and opioid-related harm outcomes

📅 1:30 PM - 2:45 PM, Oct 3
📍 Maryland D

Panel Session

Session Co-Chair: Silvia Martins
Session Co-Chair: Magdalena Cerda

In this panel we plan to present the most up-to-date research on the effects of opioid and cannabis laws and policies on opioid-related harm outcomes, including opioid use, opioid use disorder and fatal opioid overdoses. We will present research linking data from US state-level opioid and cannabis laws and policies to outcomes from the National Survey on Drug Use and Health (NSDUH), the Youth Risk Behavior Surveillance System (YRBSS) data), the CDC Restricted Mortality data and IQVIA data. In addition, we will present on recent work to develop a novel opioid policy scoring typology developed by researchers at NYU and Columbia University. First, Dr. Martins will present on the association between medical and recreational cannabis laws (MCL and RCL) and opioid outcomes by past-year cannabis use, using NSDUH data from 2015-2019. Then, Dr. Cerdá will present on spatiotemporal analyses on the potential joint effects of opioid and cannabis laws on opioid prescribing and overdose in the US from 2013-2020 using IQVIA and CDC Mortality data. Then Ms. Bruzelius will present on naloxone access laws and opioid use in youth, which found that greater access to naloxone has not been associated with frequent or riskier forms of opioid use in youth using YRBSS data from 2007 to 2019. Finally, Ms. Wheeler-Martin will present findings on the development and validation of a state-level opioid policy environment score that can serve as a critical tool for states to track how their opioid policy response ranks, relative to other states, and to evaluate the impact the opioid policy environment has on health.

Presenters:

Silvia Martins
"The relationship between medical and recreational cannabis laws with nonmedical opioid use and opioid use disorder in the USA by past-year cannabis use status"

Magdalena Cerda
"Joint effects of prescription opioid policies and cannabis legalization on opioid prescribing and overdose in the United States, 2013-2020."

Emilie Bruzelius
"Naloxone expansion is not associated with increases in adolescent heroin use and injection drug use: Evidence from 44 US states."

Katherine Wheeler-Martin
"Development and validation of an opioid policy environment score: a tool for state policy evaluation."
Urban neighborhoods have been shaped by years of differential social and economic investment over time. Urban renewal policies, implemented by the government, funded projects meant to improve “blighted” and “slum” areas of cities. While intended to advance the area, urban renewal programs also negatively impacted health by contributed to racialized displacement of long-term residents and driving neighborhood gentrification. The multi-disciplinary panel will first give historical context to urban renewal, share data resources and methods for studying urban renewal, and describe the environmental impacts of these policies in the US. Second, the harmful role of public health in US urban renewal will be discussed. Third, an international perspective on urban renewal will be provided by sharing the long-term health effects of urban renewal programs in Barcelona, Spain.

Centering Critical and Experiential Black Knowledge Traditions in Population Health Research

🌞 1:30 PM - 2:45 PM, Oct 3
📍 Maryand F

Panel Session
How do we know what we know about population health and what does it mean for the health of Black populations? One of the most enduring challenges in population health is the persistence of health inequities, especially that Black communities continue to have the worst health outcomes. As population health scientists, we hope that our work produces the knowledge needed to inform policy and practice, and that we ultimately eradicate racial health inequities. An efficient way to do this is by addressing white supremacy [1]. But what happens if the processes of knowledge production to address these issues are grounded in white supremacy? We propose a public health panel that will highlight the relevance of critical and experiential forms of knowledge in understanding and addressing health inequities in Black communities.

One of public health’s essential services is to “create, champion, and implement policies, plans, and laws that affect health.” [2]. The knowledge that informs these policies, plans and laws needs to be grounded in the experiences of those who are most negatively affected by these policies and who have had persistently poor health outcomes. Unfortunately, researchers who generate the evidence that informs public health policy and practice are predominantly White [3]. Hence, white intellectual and experiential dominance characterize knowledge production and its translation into policy and practice [1].

The goal of this panel is to introduce critical and experiential Black knowledge traditions to population health scientists as tools for achieving health equity and health justice for Black communities. Specific objectives are to:
1. Describe what it means to center Black knowledge traditions in research.
2. Provide examples of critical and experiential knowledge production processes in population health research.
3. Inspire partnerships between health scholars and non-academic community partners—partners whose lived experience expertise give meaning and value to our research.

Communicating Health Equity: Multidisciplinary Research Approaches to Advance Public Understanding and Catalyze Action

Session Chair: Sarah Gollust

The events of 2020 ushered in enormous attention to health equity among public health practitioners, researchers, advocates, and journalists, including some making linkages between health disparities and structural racism. Yet this communication occurred in the context of heightened political polarization, along with limited research or resources to support communicators in strategies to engage with these issues, mitigate negative responses, and mobilize policy action needed to advance health equity. In this panel, an interdisciplinary group of researchers – all members of the Collaborative on Media and Messaging for Health and Social Policy – will share the results of four research projects that examine the intersections of communication and health equity. First, Dr. Moreira will share the findings from a content analysis of 2022 communication in broadcast ads and local news, highlighting how racism was presented to the public during the politically-charged midterm election season. This presentation will highlight the paucity of attention to health and racism in public-facing messaging, despite the major focus among the public health community. Second, Dr. Gollust will share findings from qualitative research assessing the range of strategies and common barriers that communicators in practice faced. She will also describe key research gaps that interdisciplinary research should address to support communication practice. Third, Dr. Tait will attend to a population often overlooked in discussions of policy to advance health equity: Christians. She will present findings from a survey-based experimental design to elucidate how health equity values might activate support for population health-promotion policy among Christians. Fourth, Ms. Murad will share findings from a community-based participatory research project with a community organization that uses narrative change as a power building strategy. She will highlight the process and key findings of the collaboration to leverage communication research to support the community leaders’ storytelling capacity. In moderated discussion, Dr. Gollust will highlight key opportunities for population health researchers to engage more proactively to shape the communication environment and advance health equity.

This town-hall style session will engage attendees in considering the roles that values do and should play in population health science. The session is an integral part of an IAPHS Blog Series on Values and Science running July-October 2023.

The session seeks to address the challenges of producing the best possible science in a field that frequently deals with politically charged issues but aspires to produce knowledge that is meaningful to policymakers and practitioners across the political spectrum. Given that science and values cannot be separated, how can population health scientists call on their values in ways that maximize the validity and scope of their science, rather than blind or narrow it? How can IAPHS support them in doing this?

The session is structured to facilitate discussion in small groups about these issues. Participants will be seated at round tables and will consider, and report back on, a series of questions posed by a moderator. The Blog series can be viewed here.

Despite frequent and chronic exposure to minority stress that accelerates aging in LGBTQ+ populations, there is limited research focused on the cognitive health and aging of LGBTQ+ adults in midlife and older age. This panel uses multiple data sources (Vanderbilt University Social Networks, Aging, and Policy Study, Health and Retirement Study, Adolescent Health, and Behavioral Risk Factor Surveillance Study) to understand the role of work, social, and health contexts and the cognitive health and aging of LGBTQ+ people.

Presenters:

Tara McKay
"Accelerated Biological Age among Respondents in Same Sex and Mixed Sex Relationships in Add Health and Health and Retirement Study Data"

Ellesse-Roselee Akré
"Correlates of Subjective Cognitive Decline at the Intersections of Sexual Orientation and Gender Identity in Older LGBT Adults"

Harry Barbee
"Victimization and Cognitive Health Among Middle-Age and Older LGBTQ+ Adults"

Nathaniel Tran
"Aging in Isolation: Sexual Orientation and Sex Differences in Navigating Cognitive Decline"
Discussant: Noa Krawczyk

To accelerate and integrate opioid responses across systems and sectors, the National Academy of Medicine (NAM) formed the Action Collaborative on Countering the US Opioid Epidemic, a body of expert stakeholders tasked with generating and disseminating innovative solutions to this national crisis. Given increasing racial and socioeconomic disparities in opioid-related harms, NAM partnered with the Interdisciplinary Association for Population Health Science (IAPHS) to orient the Action Collaborative’s work in a social determinants of health framework.

After an extensive consultation process with the Action Collaborative members and external experts, the IAPHS Expert Group prepared two white papers detailing a series of opportunities and strategies for stakeholders across sectors to integrate a social determinants framework into opioid prevention, treatment, and recovery responses. This session will draw on the white papers to provide new insights into strategies that policymakers, health systems, and insurance payers can use to address the social determinants of the overdose crisis. These include, first, evidence-based and evidence-informed strategies to guide policymaker responses aligned with the four federal overdose prevention strategy priorities: prevention, harm reduction, treatment, and recovery. Second, the session speakers will outline priorities to guide systems-level practitioners—health and social service administrators, payers, and providers—to eliminate barriers to care in the health and social welfare systems.

Presenters:

Magdalena Cerda
"Setting the scene: why you need to place a social determinants of health lens on the overdose crisis?"

Kelly Knight & Magdalena Cerda
"Addressing social determinants of the overdose crisis in federal, state, and local policy"

Ricky Bluthenthal & Carmen Albizu Garcia

Evaluating housing policies with a health equity lens

11:00 AM - 12:15 PM, Oct 4
Maryland D
Housing policies are a powerful population health tool. But more often than not, they’ve been used to build wealth and health for a privileged class, explicitly or implicitly excluding people with intersecting marginalized identities. Owing to this legacy of structural oppression in housing policies, Black and Latino people, women, people with LGBTQ+ identities, immigrants, low-income households, and families with children have less wealth and housing security today and, consequently, worse health. Just as housing policies have fueled health disparities, they can also be used to combat them...but only if they’re implemented with an equity lens. To achieve maximum gains in health equity, policies must proactively enroll people with the highest needs, prioritizing communities historically excluded from housing programs and policies. Policies need to account for structural power imbalances so that even the most marginalized are empowered to access and benefit from housing reforms. Policy evaluations, likewise, must operate with an equity lens. This means measuring effects of population-level policies not only on population-wide outcomes, but on health disparities and within marginalized communities. In this panel, we feature health equity evaluations of several promising policies to promote safe and secure housing, including inclusive zoning, rent regulation, implied warranties of habitability, eviction moratoria, emergency rental assistance, and tenant right-to-counsel. Using methods ranging from quantitative natural experiments to case studies and qualitative interviews, presenters assess whether health benefits from housing policies were distributed equitably. Lessons learned from these studies will inform the implementation of housing policies to promote health equity.

Presenters:

Courtnee Melton-Fant
"State preemption, zoning, & tenant protections: effects of housing policies on health inequities"

Alina Schnake-Mahl
"A natural experiment for the impact of rent regulation on health disparities"

Gabriel Schwartz
"Implied warranties of habitability and housing-sensitive respiratory health outcomes"

Kathryn Leifheit
"Pandemic housing policies, homelessness, and food insecurity: testing for differential effects by race and ethnicity"

Danya Keene
"A qualitative study of Connecticut’s right-to-counsel program"
Access to and control over neighborhood resources are not equally distributed across America, reinforcing risk for vulnerable populations and exacerbating health disparities. Efforts to address this problem have long been hindered by a lack of national, standardized, longitudinal metrics of the local neighborhood environment. Now, a novel open data repository, the National Neighborhood Data Archive (NaNDA), offers researchers, clinicians, policy makers, public health departments, and community organizations, among others, access to data on a wealth of contextual measures that are theoretically derived and relevant for clinical, social, and psychological health and healthy aging outcomes. NaNDA is created by drawing from multiple contextual data sources to create measures (e.g., walkability, crime, racial residential segregation, socioeconomic disadvantage and affluence, recreational centers, libraries, fast food, climate, healthcare, housing, public transit, civic participation) that can be readily linked to existing survey data, cohort studies, or electronic medical records. Temporal coverage spans more than three decades (1980-2020) at a range of geographic levels (state, county, tract, block group, metropolitan statistical area, zip code). The three presentations in this panel use NaNDA data to investigate diverse critical population health topics: COVID-19, dementia, and climate change. We illustrate the way these data can be used to refine research questions and methodologies, and to hone the translation of results for policy and practice.

**Presenters:**

Grace Noppert  
"Neighborhood Social and Environmental Predictors of COVID-19 Burden"

Yeon Jin Choi  
"Neighborhood Resources and Risk of Institutionalization among Persons with Dementia"

Danielle Rhubart  
"Social Infrastructure Capacity and Climate-related Disasters: Implications for Population Health"
This panel will broadly focus on:

1. Measurement of various forms of discrimination (e.g. racism, sexism, xenophobia, homophobia, anti-Muslim, intersectional) using primary and secondary data sources. Talks under this topic include but are not limited to development and validation of novel instruments for measuring discrimination, validation and testing of existing discrimination instruments, and theories/models/approaches to inform measurement of discrimination.

2. Ethical considerations when studying discrimination. Talks under this topic include but are not limited to sensitivities around data collection, support for study participants and research staff, and ethical implications of disseminating and acting upon (e.g. advocacy) study findings. We anticipate talks under this topic being informed by the personal perspectives and experiences of panelists.

Presenters:

Naheed Ahmed
"Measurement of Intersectional Discrimination: Assessing the Everyday Discrimination Index Using Cognitive Interviews"

Linda Thompson
"Reflecting on Stories of Discrimination to Empower and Build Authentic Relationships with Black Communities"

Goleen Samari
"Structural Anti-Muslim Racism and Health: The Role of State-level Policies"

Within-Group Risk and Protective Factors for LGBTQ Youth Suicide in the U.S.

11:00 AM - 12:15 PM, Oct 4
Federal Hill

Lesbian, gay, bisexual, transgender, queer, and questioning (LGBTQ) young people report four times the rate of attempting suicide in the past year compared to their cisgender, straight peers. This disparity in mental health and well-being is not due to being LGBTQ in and of itself but is instead due to the marginalized status LGBTQ people have in society. Using this framework, the panelists will use diverse academic backgrounds — from social work to clinical and developmental psychology — to present mental health findings from a national sample of over 28,000 LGBTQ youth in the United States. They will further explore distal factors that increase the risk of suicide and promote well-being and ways to incorporate these understandings into prevention efforts. Those in attendance will be encouraged to participate in the discussion around how to better implement such strategies into their work with youth and/or research programs.

Presenters:

Jonah DeChants
"Transgender and Nonbinary Youth Mental Health Associations"

Steven Hobaica
"Mental Health by Urbanicity in LGBTQ Youth"

Session Chair

J'Mag Karbeah
Assistant Professor
University of Minnesota
As a consequence of the murder of George Floyd by Minneapolis police officers in 2020 and the subsequent protests calling for the dismantling of structural racism, racialized policing and mass incarceration are increasingly being understood as a key driver of racial health inequities. These two forms of structural racism are intertwined; police supply the bodies necessary to fill prisons and disproportionately disenfranchise people from racialized communities. Racialized policing and mass incarceration have health consequences above and beyond the direct violence individuals encounter within these systems. Prior research has shown strong linkages between both direct and vicarious exposure to judicial treatments and a profound effect on the reproductive health of racialized pregnant people, across generations and throughout the lifecourse. This panel will feature three novel studies interrogating the ways in which racialized policing and mass incarceration drive women’s health, as well as comprehensively surveying proposed strategies to ameliorate these inequities. After a presentation from each of the three panelists, we will engage the audience in a rich discussion on how to achieve racial health equity in a carceral society.

Session Chair: Katherine Dickinson

In the face of increasing climate-driven disasters, there is a need to build our collective capacity for rapid and responsive research to facilitate learning and support short- and long-term recovery and resilience. On December 30, 2021, Colorado's Marshall Fire destroyed 1,084 homes in the communities of Louisville, Superior, and unincorporated Boulder County, becoming the most destructive fire in the state's history. In the aftermath of this disaster, researchers with wide-ranging expertise came together to coordinate data collection, analysis, and dissemination efforts, working with local governments and community organizations. In this panel, team members will present on interdisciplinary, mixed-methods research into the environmental, physical, and mental health impacts of the disaster, as well as climate and wildfire resilience policy change processes. We will also describe community engagement and dissemination approaches, as well as efforts to share our survey instruments and research methods to support capacity-building in responsive disaster research methods going forward.

Presenters:

The role of the Supplemental Nutrition Assistance Program (SNAP) for addressing food security and advancing health equity: SNAP participant perspectives and evidence from evaluations of SNAP policy changes

3:15 PM - 4:30 PM, Oct 4
Maryland E

Panel Session Co-Chairs: Julia Wolfson and Laura Samuel

The Supplemental Nutrition Assistance Program (SNAP) is the largest federal food program in the United States (US) and the nation’s primary means of mitigating food insecurity by providing support for individuals with low incomes to purchase food. However, food insecurity remains a persistent problem in the US, and is associated with numerous adverse outcomes, disparities, and health inequities. This panel brings together presentations exploring food insecurity rates and disparities based on disability status and SNAP participation, two evaluations of recent policy changes designed to strengthen SNAP, and a national survey of SNAP participants’ support for various potential policy changes and strategies to help them access and afford healthy food. This panel will highlight disparities in food security and SNAP participation in key at-risk populations, evidence as to the effect of policy changes that attempt to address health inequities, and the perspectives of SNAP participants themselves.

Excess mortality during the COVID-19 pandemic: gender and other social determinants of excess risk

3:15 PM - 4:30 PM, Oct 4
Maryland F

Session Chair: Andrew Stokes

The COVID-19 pandemic has been marked by extraordinary inequalities and offers a window into processes that drive health inequities. Most existing research on gender-based inequalities has focused on excess mortality among male individuals infected with SARS-CoV-2, but gender stratification in occupation, education, marital status, and other risk factors for COVID-19-related mortality contributes to net inequities. In this panel composed of sociologists, demographers, and epidemiologists, we use research on increases in mortality during the pandemic era to understand how social processes shaped vulnerability across pandemic waves and geographies.

The Health Impacts of Criminal Legal System Contact Across the Life-Course

Session Chair: Dylan Jackson

Criminal legal system contact - including aggressive policing and mass incarceration - has known health impacts on individuals and families across the life course. Even so, additional research employing interdisciplinary perspectives that apply an intersectional lens to the study of carceral-impacted populations is needed to advance this literature and meaningfully shift practice and policy. The current panel is comprised of presenters from the fields of criminology and criminal justice, public health, and social epidemiology, with co-authors trained in clinical and developmental psychology, family and human development, psychiatric epidemiology, criminology and criminal justice, and public health dentistry. Featured studies include research on diverse health sequelae of police exposures and incarceration. In doing so, these projects also examine the intersections of race, ethnicity, gender, sexual identity, and disability status. Collectively, the findings illustrate the harms of the carceral system for the health and well-being of children, adolescents, and adults, and point to promising policy and intervention approaches to reform these systems, mitigate harms, and promote the health of the public.

Exploring the Role of Power Distributions in Structural Approaches to Immigrant Health

Session Chair

Dylan Jackson
Johns Hopkins University

Speakers

Farah Qureshi
Johns Hopkins Bloomberg School of Public Health

Lindsey Webb
Assistant Scientist
Johns Hopkins Bloomberg School of Public Health

Alex Testa
Assistant Professor
University of Texas Health Science Center at Houston
Research on immigrant health has taken a structural turn in recent years, emphasizing how various dimensions of state (and sub-state) 'context' contribute to inequalities between the native- and foreign-born. This panel will explore the connections between this rapidly-growing research and work on power distributions and health. The primary aim is to highlight opportunities for theoretical and methodological innovation.

Panelists will prepare, deliver, and react to one others' remarks in response to the following questions:
1. How are structural factors such as public policy, immigration enforcement practices, and public opinion connected, in the real world, to power distributions in key social domains?
2. How can these structural factors be connected, in empirical work, to power distributions such that research on the macro-level determinants of immigrant health inequalities is advanced? What about research on the macro-level determinants of health inequalities along other social axes?
3. What are the unique challenges to forging such a connection? How can these challenges be addressed?

Audience members will be encouraged to offer their own perspectives and pose their own questions to the panelists. Through this exchange, we seek to support efforts to expand the boundaries of this work among existing scholars and stimulate interest in this work among prospective scholars.

Panelists:
Megan Reynolds
Maria-Elena De Trinidad Young
Goleen Samari
Courtney Boen

**Speaker Information**

**Session Chair**
Megan Reynolds
Associate Professor
University of Utah

**Speakers**
Maria-Elena Young
UC Merced

Goleen Samari

Courtney Boen
Assistant Professor of Sociology
University of Pennsylvania

---

**Poster Session 3**

5:00 PM

**Setup:** Wednesday starting at 1:00PM

**Takedown:** Thursday by 10:00AM

---

**Thu, Oct 05, 2023**

**Registration**

8:00 AM

**Plenary Session 3**
Mentoring Award Winner Remarks

The Milbank Quarterly Early Career Award Winner Remarks

Postdoctoral Award Winner Remarks

**Invited Panel 3:**
"Translational science is not a relay race: How to carry the baton to the population health finish line."

**Speaker:** Brian Mustanski

**Session Chair:** Mark Hayward

---

**Speaker**

**Brian Mustanski**
Director, Institute for Sexual and Gender Minority Health and Wellbeing, Director, Third Coast Center for AIDS Research, Professor, Department of Medical Social Sciences
Northwestern University

---

**Session Chair**

**Mark Hayward**
Professor of Sociology and Centennial Commission Professor in the Liberal Arts
University of Texas at Austin

**10:30 AM**

**Coffee Break**

**11:00 AM**

**US Health and Mortality Compared to Peer Countries: Did the COVID-19 Pandemic Accelerate a Growing Disadvantage?**

**Session Co-Chair:** Andrew Stokes

**Session Co-Chair:** Elizabeth Wrigley-Field

The US crisis of poor health and early death is deep and longstanding. Relative to peer countries, US citizens are in poorer health and experience higher mortality across a broad range of health conditions and causes of death. While historical trends in the US health and mortality disadvantage have been well characterized, it is less clear how these gaps have been affected by the COVID-19 pandemic. In this panel, we consider whether the pandemic represented a continuation of previously established patterns or whether it marked a discontinuity in the US morbidity and mortality experience relative to other wealthy countries. By comparing the US to its peers, the panel seeks a better understanding of the factors that shaped US mortality during the pandemic, how the US experience differed from that of other nations, and where US policy makers should focus to close these health gaps.

**Presenters:**

Jennifer Dowd
"A Tale of Two Countries: Pandemic mortality in the US and UK"

Anna Zajacova
"A Comparison of Chronic Pain Prevalence and Management during COVID in the United States and Canada"

Neil Mehta
"Trends in cognitive impairment among older adults in the U.S. and Europe, 1996-2018"

How Structural Sexism & Structural Gendered Racism Harm Population Health: A Focus on Emerging Evidence and Approaches

11:00 AM - 12:15 PM, Oct 5
Maryland D

Session Chair: Patricia Homan

A small but growing body of research on structural sexism has begun to focus attention beyond individual-level gender discrimination, harassment, and bias to document the ways systemic gender inequality embedded in social institutions and policies undermines population health.

This interdisciplinary panel will provide a discussion about contemporary theories and measures of structural sexism and structural gendered racism and present novel research on how these forms of oppression shape health and healthcare. Research included in this panel pays special attention to the role of abortion policy as key indicators of structural sexism. The panel will also highlight the relationship between structural sexism, structural gendered racism, and healthcare. Speakers will address key questions related to methodological and analytical issues, as well as provide insight into key gaps and priorities for future research on structural sexism and health.

Presenters:

Patricia Homan

Bethany Everett & Catherine Taylor
"Abortion Use and Access as Key Determinants of Women’s Economic and Educational Futures"

Ariel Beccia
"Studying the life-course effects of structural sexism on population health outcomes: Methodological and analytic considerations"

Goleen Samari
"Structural Gendered Racism: Immigrant women’s health and healthcare experiences"
The growth of deaths of despair in the United States has highlighted the role of depression in driving population health trends. Among mental illnesses, depression stands out for both its prevalence and capacity to present across life stages. This panel features four papers from early career researchers that examine how life course contexts shape depression risk. Presenters examine depression through the lenses of parental criminal justice involvement and adolescent wellbeing, nonparticipation in employment and education in emerging adulthood, stigma and remission in Malawi, and differences between and within American racial groups. Each study uses powerful methodologies to address pertinent questions related to mental health. Findings offer valuable insights into the relationship between depression and social inequalities across populations.

**Presenters:**

- **Katie Berry**
  "The Effect of Collateral Consequence Policies on Mental Health among Adolescents with Fathers with Criminal Records"

- **Michael Caniglia**
  "Nonparticipation in Work and Education in Emerging Adulthood and Men’s Mental Health in Early Midlife"

- **Kelsey Shaulis**
  "Academic Achievement and Midlife Mental Health"

- **Carlyn Graham**
  "Inter- and Intra-Group Differences in Depression among Black and White Early Adults"
Ethics and numbers meet: Quantitative intersectionality research methods

11:00 AM - 12:15 PM, Oct 5
Federal Hill

Session Chair: Yukiko Asada

Health disparities have been described by numerous socially meaningful characteristics, for example, race, education, income, gender, sexual orientation, disability status, and immigration status. In recent years, the idea of intersectionality increasingly is gaining attention, arguing for the importance of examining intersections of these characteristics because structural power dynamics in society critically manifest in these intersections. An exciting quantitative methodological development has ensued, moving from basic cross-tabulations and interaction terms in regression models to data-driven examination of a large number of intersectional groups using such methods as multilevel modeling and decision tree. In addition to such descriptive, health disparity “hotspotting,” analytical intersectionality methods are also in development, exploring how structural power dynamics explain such health disparity hot spots. What is missing in this exciting expansion of intersectionality, originally developed in Black feminism, to health disparities research at large is a normative guidance. Is it possible to consider multiple structural power dynamics at once, for example, racism, gender discrimination, and capitalism? If so, how, and if not, how and what should we prioritize? Is a greater number of intersections, therefore, finer health disparity “hot spotting,” always more meaningful? Data availability issues aside, which intersections should we look at and why? Should the intersectionality approach allow us to discuss the negative impact of structural power dynamics on the privileged as well as the less privileged? With leading epidemiologists and ethicists in this developing field, this panel explores where ethics and numbers meet in quantitative intersectionality research methods.

Presenters:

Erika Blacksher
"Normative dimensions of intersectional health inequalities"

Kelvin Choi
"Implementing an intersectionality perspective using a joint machine learning and regression approach: An illustrative example"

Stephanie Cook
"It can't always be about the numbers: Thinking critically about the question that informs our analysis"
Session Chair: Danya Keene

This panel leverages mixed-methods data from a longitudinal cohort study in New Haven, CT (The Justice Housing and Health Study) to examine the intersections of housing, mass incarceration, and health with a focus on gender and relationships. Together, these papers extend a growing housing and health literature that has largely considered housing as an individual-level exposure, to consider the ways that housing insecurity may operate in a relational context to affect partners, family members, and social networks. The panel also extends the existing literature to explicitly consider the role of gender inequality, and its intersections with racial inequality, in creating housing insecurity and shaping the health impacts of housing access. The first paper uses survey data to examine how the housing status of an individual’s sexual partner shapes HIV risk and how these effects vary by race and gender. The second paper uses the same data set to examine the relationship between being evicted and perpetrating violence against one’s intimate partner and the factors that may moderate this relationship. The third paper draws on qualitative interview data, collected with a subset of these survey respondents, to examine the experiences of women who provide housing to men who are excluded from housing access, often due to criminal legal barriers.

Presenters:

Kim Blankenship
"Gender and Housing Stability of Self and Partner: Impacts on HIV Related Risks"

Ali Groves
"Examining intimate partner violence (IPV) as a consequence of eviction"

Alana Rosenberg
"Gender, Informal Housing Provision, and Criminal Legal Involvement: Implications for Health and Wellbeing"

A multi-method approach to achieve equity in access to transplant

11:00 AM - 12:15 PM, Oct 5
Homeland

Session Chair: Nrupen Bhavsar

Nationally, health inequities result in more than $90 billion in excess medical care costs and $42 billion in lost productivity per year. Most of this cost is attributable to patients with complex care needs, including those with organ failure who need an organ transplant for survival. Patients from marginalized groups (e.g., women, racial and ethnic minorities, patients with low socioeconomic status) have disproportionately low rates of organ transplant. Despite a large body of research, these inequities have worsened for more than two decades in the United States and have been highlighted in the recent Senate Finance Committee hearings and the 2022 National Academies of Science Engineering and Medicine (NASEM) consensus study report. Neither national data registries nor national research networks that use electronic medical record data contain sufficient data on social determinants of health to identify and characterize center and system level drivers of inequities in access to transplant, or identify causal mechanisms between psychosocial risk and adverse clinical outcomes. Novel research in this area will be discussed, focusing on 1) measurement of structural racism’s effects on health outcomes in patients with organ failure, 2) methods of combining SDOH at the individual and community levels with patient electronic medical record data and 3) designing interventions to improve equity in access to complex care. Members of the panel will also discuss the recently formed Consortium for the Holistic Assessment of Risk in Transplant (CHART), which aims to identify causal mechanisms between psychosocial risk and adverse clinical outcomes, and in doing so demonstrate the critical impact of social determinants of health in patients with organ failure.

Presenters:

Lisa McElroy
"Health inequities in organ transplant: How did we get here?"

Dinushika Mohottige
"Mechanisms of structural racism in organ transplant"

Katie Ross-Driscoll
"Methods and applications of connecting individual and neighborhood level SDOH"

Aly Strauss
